

Digital Signatures Tool - Readme

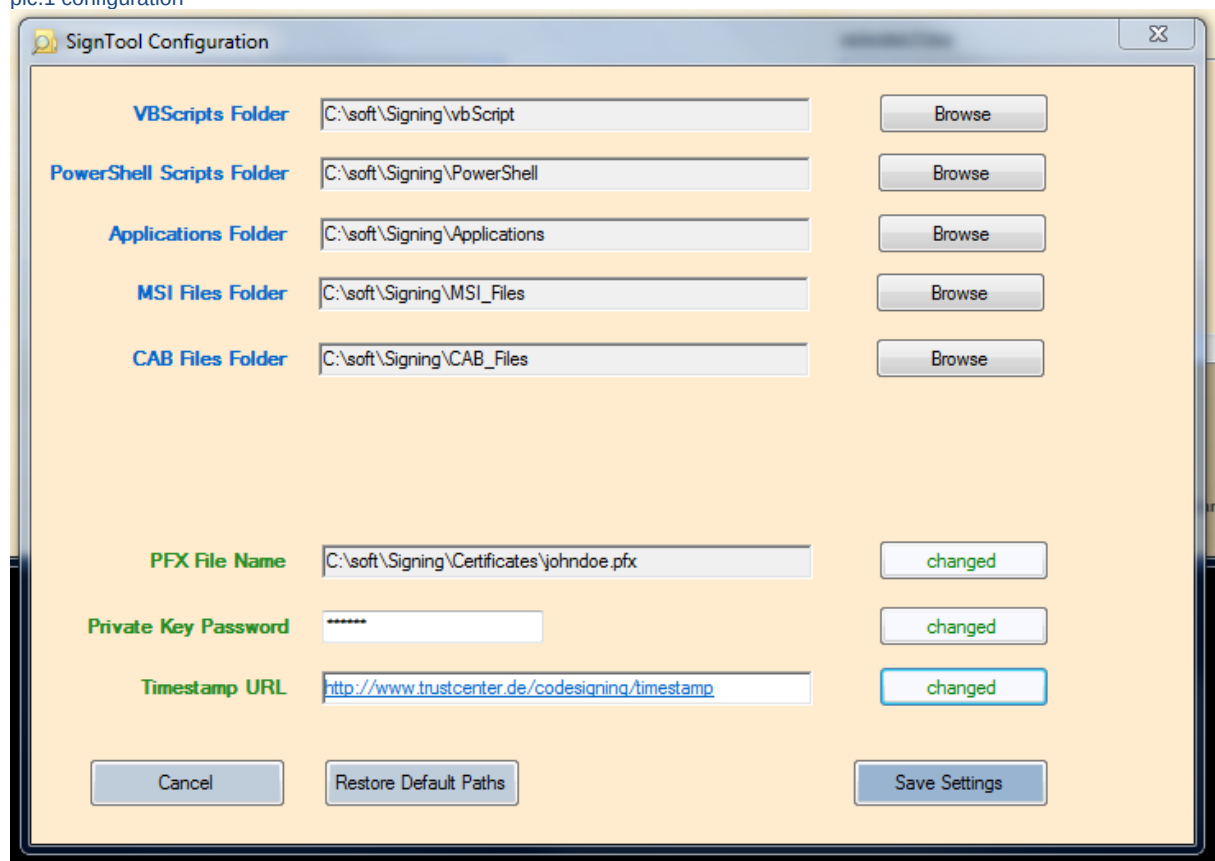

Configuration

You have to configure the tool at first start, please enter the folders where you want to sign the different kind of scripts and or applications, you also have to choose a code signing certificate and the password of the private key.

Click change when done and Save settings button to finish configuration. By default you can press the restore defaults button which will create some sample folders which you can use afterwards. This will create a folder c:\soft and some subfolders.

If you do not have a certificate you can create one for your own within the tool, after it has been created, you have to open your personal certificate store, then just export it with the private key to a folder of your own and then import the pfx file into the tool in the Options menu.

pic.1 configuration

The image shows the 'SignTool Configuration' dialog box. It has a title bar with a close button. The main area is divided into two sections. The top section contains five rows, each with a label, a text box, and a 'Browse' button. The labels are 'VBScripts Folder', 'PowerShell Scripts Folder', 'Applications Folder', 'MSI Files Folder', and 'CAB Files Folder'. The text boxes contain the paths 'C:\soft\Signing\vbScript', 'C:\soft\Signing\PowerShell', 'C:\soft\Signing\Applications', 'C:\soft\Signing\MSI_Files', and 'C:\soft\Signing\CAB_Files' respectively. The bottom section contains three rows, each with a label, a text box, and a button. The labels are 'PFX File Name', 'Private Key Password', and 'Timestamp URL'. The text boxes contain 'C:\soft\Signing\Certificates\johndoe.pfx', '*****', and 'http://www.trustcenter.de/codesigning/timestamp' respectively. The buttons are labeled 'changed', 'changed', and 'changed'. At the bottom of the dialog are three buttons: 'Cancel', 'Restore Default Paths', and 'Save Settings'.

Field	Value	Action
VBScripts Folder	C:\soft\Signing\vbScript	Browse
PowerShell Scripts Folder	C:\soft\Signing\PowerShell	Browse
Applications Folder	C:\soft\Signing\Applications	Browse
MSI Files Folder	C:\soft\Signing\MSI_Files	Browse
CAB Files Folder	C:\soft\Signing\CAB_Files	Browse
PFX File Name	C:\soft\Signing\Certificates\johndoe.pfx	changed
Private Key Password	*****	changed
Timestamp URL	http://www.trustcenter.de/codesigning/timestamp	changed

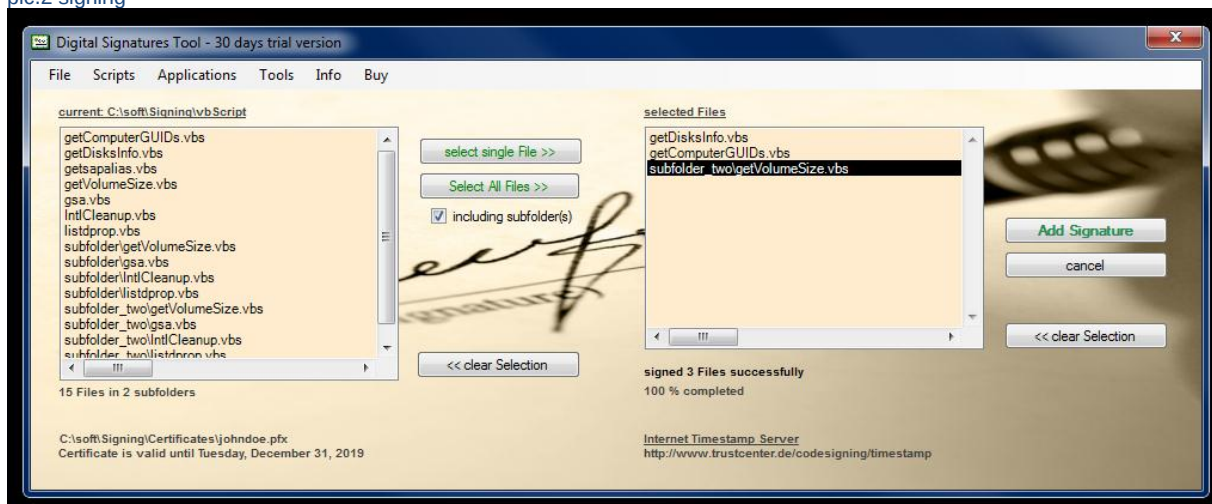

Buttons: Cancel, Restore Default Paths, Save Settings

be sure to verify all paths, certificate name and private key password by selecting the corresponding button before you save the configuration. All configurations will be saved for future use. The private key password will be stored in an encrypted form for safety reasons.

After configuration has been done you can start signing applications, script or msi files by selecting the kind of file in the menu. You can sign single files or even a complete bunch of dozens or hundreds or more files as a batch job. The tool will find all files in a complete sub tree if you have chosen to do so.

If you are done selecting just press add signature and all files will get a code signing certificate.
